## Automated Fare Collection System

Multi-modal automatic fare payment systems enables easy travel and improves passenger experience.

We offer various design options such as standalone validators or integrated smart card readers. Our flexible technology is based on standards and allows the addition or transition to new mobile payment options and offers to meet diverse agency requirements thus protecting the agency's investment.

### LECIP AFC SYSTEM

- collects and reports revenue accurately and efficiently,
- allows introduction of flexible fares,
- addresses target riders with tailored products,
- allows you to engage your customers,
- enables passengers to get board safely and smoothly,
- ensures great rider experience,
- includes datamarts allowing deep & insightful analytics.

Central System consolidates, aggregates, transforms, monitors and controls all elements of the AFC system. All AFC devices are connected to, will integrate with, and share data with the Central System.

#### CENTRAL SYSTEM

The Central System contains all relevant data and functions for setting and managing Automatic Fare Collection System:

- Lists access to all AFC devices and manages their settings
- Manage media, view cardholders information, block cards
- Configure fares that are adapted to the specifics of the route network and business rules
- Monitor and maintain devices to assure smooth operations

- Get relevant insights about revenue and ridership with deep analytics and reporting. Can be paired with TMS data seamlessly.
- Distribute settings to devices and ensure that the system is always up to date and that it runs smoothly.
